

WEBSITE REVIEW & REDESIGN PROPOSAL

Your sign says “Afraid of the dark?” *Your website should too.*

A performance review of timgreenlandscaping.com, plus a redesigned site built to load fast, show up in local searches and sell outdoor lighting, in English and Spanish.

PREPARED FOR

Tim Green
Green Landscaping, Marietta, GA

DATE

November 1, 2026

LIVE DEMO

green-landscaping-demo.onrender.com

SUMMARY

The short version

Your current website looks professional. The problem is what happens on a phone, which is where most people find a local landscaper.

YOUR CURRENT SITE

17.0s

until the main image appears on a phone. Google rates anything over 4 seconds as poor.

THE REDESIGN

3.5s

for the same test. That's about 5× faster, at under a fifth of the page weight.

1 **It's slow on phones**

Google's mobile performance score is 33 out of 100. Most of the delay comes from tracking code and a video that loads before anyone presses play.

2 **Outdoor lighting is missing**

Your yard signs lead with outdoor light installation. Your home page never mentions it, so people who see the sign and look you up find nothing about it.

3 **Google can't read it well**

The description Google shows in search results is your whole home page run together. Nothing on the page tells Google it's a local landscaping business in Marietta.

4 **It's English only**

There's no Spanish version. The redesign has an English/Español switch built in.

Bottom line: the redesign fixes speed, search, the missing lighting service and Spanish in one project, and keeps everything that works today: your photos, services, phone number and email.

SCORECARD

Side-by-side test results

Both sites were tested the same way, with Google's own Lighthouse tool simulating a typical phone on a mobile connection.

MEASURE	YOUR CURRENT SITE	THE REDESIGN
Overall performance Google's 0–100 speed score	33 POOR	89 NEEDS WORK
Main image appears When the page looks loaded	17.0 s POOR	3.5 s NEEDS WORK
First thing on screen How long the visitor stares at a blank page	5.8 s POOR	1.9 s NEEDS WORK
Page frozen while loading Taps and scrolls don't respond	1,360 ms POOR	0 ms GOOD
Ready to use Fully responsive to taps	17.0 s POOR	3.5 s NEEDS WORK
Page weight Data a phone has to download	3.5 MB	0.6 MB
Accessibility	97 GOOD	98 GOOD
Best practices	79 NEEDS WORK	96 GOOD
Search engine basics	92 GOOD	66*

*The demo is deliberately hidden from Google so it can't compete with your real site while it's a preview. That setting lowers this one score and comes off at launch. Ratings use Google's published thresholds. The redesign's remaining "needs work" items are mostly image size: your current photos are low resolution, and new photography (page 6) lets us tune them.

FINDINGS

What we found on your current site

Each issue, and what it means for getting calls.

Third-party code slows every visit

Google Tag Manager (456 KB) and Facebook tracking (208 KB) freeze the page for about 1.1 seconds. A YouTube video downloads 1.1 MB before anyone presses play.

WHY IT MATTERS

Visitors on phones wait on code they never see. The video can load only when someone taps it, and tracking can be trimmed to what you actually use.

Outdoor lighting isn't on the home page

Your yard signs lead with “Afraid of the dark? Outdoor light installation.” The home page lists six services, and lighting isn't one of them.

WHY IT MATTERS

Your signs bring people to your website, and the lighting service they came for isn't there. The redesign gives lighting its own section with a day/night comparison.

The Google search snippet is jumbled

The description Google shows is the full home page text in one run-on line, including a raw YouTube link. Your SEO plugin generated it automatically.

WHY IT MATTERS

That snippet is your first impression in search results. A clear, written description gets more clicks.

No local business information for Google

The site doesn't use structured “local business” data: business type, phone, city, service area and services.

WHY IT MATTERS

That data helps Google show you for searches like “landscaper near me.” The redesign includes it.

Hard to tap on a phone

Some buttons and links are too small or too close together. Seven links have vague wording like “read more.” Only one link on the page dials your number.

WHY IT MATTERS

Every missed tap is a lost call. The redesign keeps a Call button on screen as visitors scroll.

Repeat visits aren't faster

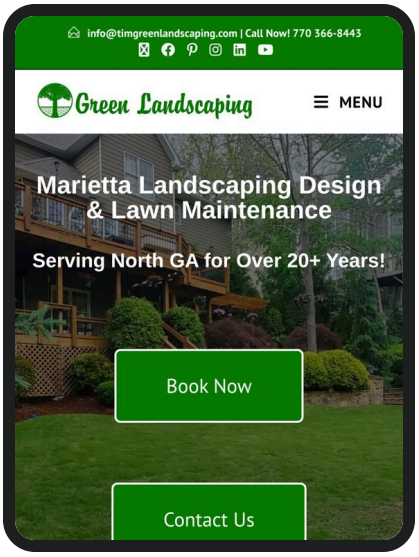

87 files are set up so phones don't keep them between visits.

WHY IT MATTERS

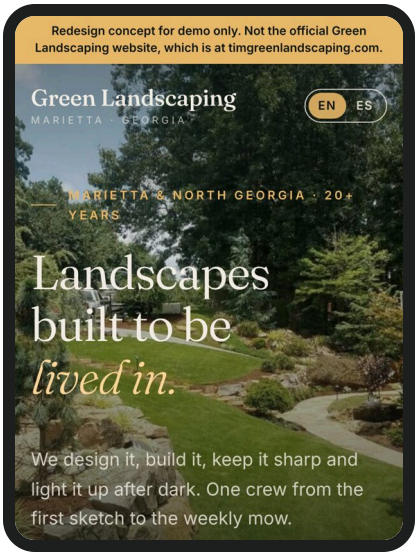

People often look at a contractor's site several times before calling. Each visit should be quicker than the last.

THE REDESIGN

What a visitor sees on a phone

Current site
timgreenlandscaping.com

Redesign, English
Tap EN / ES at the top

Redesign, Español
The whole page switches

EN ES

Built-in Spanish. One tap switches the whole site to Spanish: headings, services, the quote form and image descriptions. The choice is remembered on the visitor's next visit. Your current site is English only and has no translation option.

FEATURE	CURRENT	REDESIGN
English / Spanish switch	No	Yes
Outdoor lighting section with day/night comparison	No	Yes
Call button stays on screen on phones	No	Yes
Local business data for Google	No	Yes
Quote form with service selection	Separate page	On the home page*
Your project photos	Yes	Yes

*The demo's quote form shows what it would send but isn't connected yet. At launch it delivers to the email address you choose.

NEXT STEPS

From demo to live site

The demo is ready to try today. Here's what it takes to make it your real website.

TRY THE DEMO

green-landscaping-demo.onrender.com

OPEN IT IN SPANISH

green-landscaping-demo.onrender.com/?lang=es

1 **Your go-ahead**

Review the demo and tell us what to change: wording, services, anything that doesn't sound like you.

2 **Photos**

Your current photos are small, so they look soft on large screens. A half-day shoot, including night shots of finished lighting jobs, replaces them and the concept night image.

3 **Logo and social links**

Add your tree logo and your Facebook, Instagram, Pinterest, LinkedIn and YouTube links from your current site.

4 **Quote form**

Choose the email address that should receive quote requests.

5 **Spanish review**

A native Spanish speaker reads through the translation before launch.

6 **Launch on your domain**

Point timgreenlandscaping.com to the new site. Your address and email stay the same.

How we tested. Google Lighthouse 12.2.1, mobile simulation (a mid-range phone on a slow 4G connection), run on November 1, 2026 against the home page of each site. Scores can move a few points between runs. The gap between the two sites is far larger than that. This is a lab test, not data from your real visitors. Findings cover the home page only. The redesign's night view is an illustration made from a daytime photo. Your current site's photos are used with the understanding that they're your own work.
